

**SPECIAL INSTRUCTIONS FOR ALL PANELS:**

**Cleaning Protocol:**

Cleaning must be performed without the use of abrasives or chemicals. Only air, water, and microfiber cloths as specified by the manufacturer are permitted for cleaning.

**Contractor Responsibilities:**

The contractor must provide all necessary labor, labor supervision, and approved materials to clean the solar panels at the specified site. The contractor must provide cleaning mops, water pumps/motors, electrical extension wire, and flexible water pipe as required to meet the specific site conditions.

**Utilities:**

Only Water and electricity connections will be supplied by IBA. Power cable & water pipe for the pump are needed on-site; the contractor is responsible for arranging and supplying these items.

**Water Usage:**

The contractor must use a Karcher or equivalent pump or low-water consumption equipment to minimize water wastage.

**Scaffolding and Ladders:**

IBA will provide one scaffolding unit. If additional scaffolding or ladders are required, it will be the contractor's responsibility to arrange them.

**Safety Equipment:**

All laborers must wear appropriate safety gear. Any laborer without proper safety equipment will not be permitted on site.

**Note:**

The contractor is responsible for any damage to the solar arrays or PV modules caused during cleaning. This includes replacement with an equivalent make, model, and specifications, along with all related accessories.
