

This is to inform that today a visit conducted at City Campus IBA, Tender for material supply, cable laying with installation, commissioning at Aman tower.  
Total nine number participant came for visit attached the attendance sheet for your perusal, Please review.

We have some conflict about cable brand. We require Pakistan Cables specifically for this job.  
The existing circuit was originally constructed using Pakistan Cables CU/PVC/PVC 300mm.Sq x 4 Core Cable, 600/1000 volt, and we now plan to upgrade the system by doubling the cable size to meet the increased power-carrying requirements. Using a different cable brand at this stage may introduce variations in conductor material, resistance, and overall electrical characteristics. As a result, the cables may not share the electrical load equally, which can lead to current imbalance, overheating, or reduced reliability of the circuit. To maintain consistency, ensure optimal performance, and avoid any potential operational risks, we prefer to continue using the same brand (Pakistan Cables) as previously installed.
